

**Global Sunn™ inter row sown
with Tillage Radish
@Kalbar, QLD; Early May**

- One of the fastest growing legumes
- Summer nitrogen fixer;
- Exceptional quick growth
- Summer cover crop option with Grazing potential to be terminated at first flower
- Excellent option as a companion with Tillage Radish® and cover crop mixes

Excellent Nitrogen fixer

Consult AGF Seeds for inoculant options and availability

DeepTill™ SummerMAX

Global Sunn™

Tillage Radish®

Crown Sorghum

Shirohie Millet

Greenland Rape

This mix is excellent for:

Quick and quality feed
Excellent grazing quality
Bio-drilling
Nutrient retention
Soil Cover
Suppress summer weeds
Nitrogen Fixing

DeepTill™ SummerMax Helps Improve Soil Health, Biomass and Forage Production

DeepTill™ SummerMax provides bulk summer feed with excellent quality. The mix of species balances the diet to optimize animal production in the summer months with the first grazing being as early as 6 weeks.

As seed sizes of the are similar in size; sowing depth and flow ability is a lot easier.

Contact your local agronomist on this exciting new blend to add value to your summer feed options.

Planting Tips:

Planting: late spring/summer/autumn

Sowing Rate: 15-20kg/ha

Control: Can be grazed/ cut for hay or sprayed out. To be grazed/silage/hay at first onset of Tillage Radish® & Global Sunn™ first flower.

AGF Seeds recommend to terminate Global Sunn™ at first flower as above picture demonstrates.

Post this growth stage will result in plant becoming 'ropey'. It is ideally sown with increasing soil temperature reaching 14 degrees demonstrating that sowing post winter crop harvest or on opportunistic summer rains.
